

• AI-POWERED COMPLIANCE PLATFORM · HIPAA · SOC 2

The regulatory AI that **shields** your business.

One platform for HIPAA and SOC 2 — built for healthcare and healthcare SaaS teams who need **continuous, audit-ready compliance** without an enterprise GRC budget.

• THE PROBLEM

Compliance today lives in **ten different places** — and none of them talk to each other.

Most healthcare teams patch HIPAA and SOC 2 together with the tools they already have. Spreadsheets get stale. Evidence gets lost. Audits become a scramble.

• WHAT SHIELDRA SOLVES

From a once-a-year scramble to a continuous operating system.

TODAY — POINT-IN-TIME

"Are we ready for the audit?"

- ✗ Compliance posture is unknown between audits
- ✗ Gaps surface only when a customer or auditor asks
- ✗ Consultant reports go stale the day they ship
- ✗ Same regulatory bar, a fraction of the budget

WITH SHIELDRA — CONTINUOUS

"Here's our readiness, today."

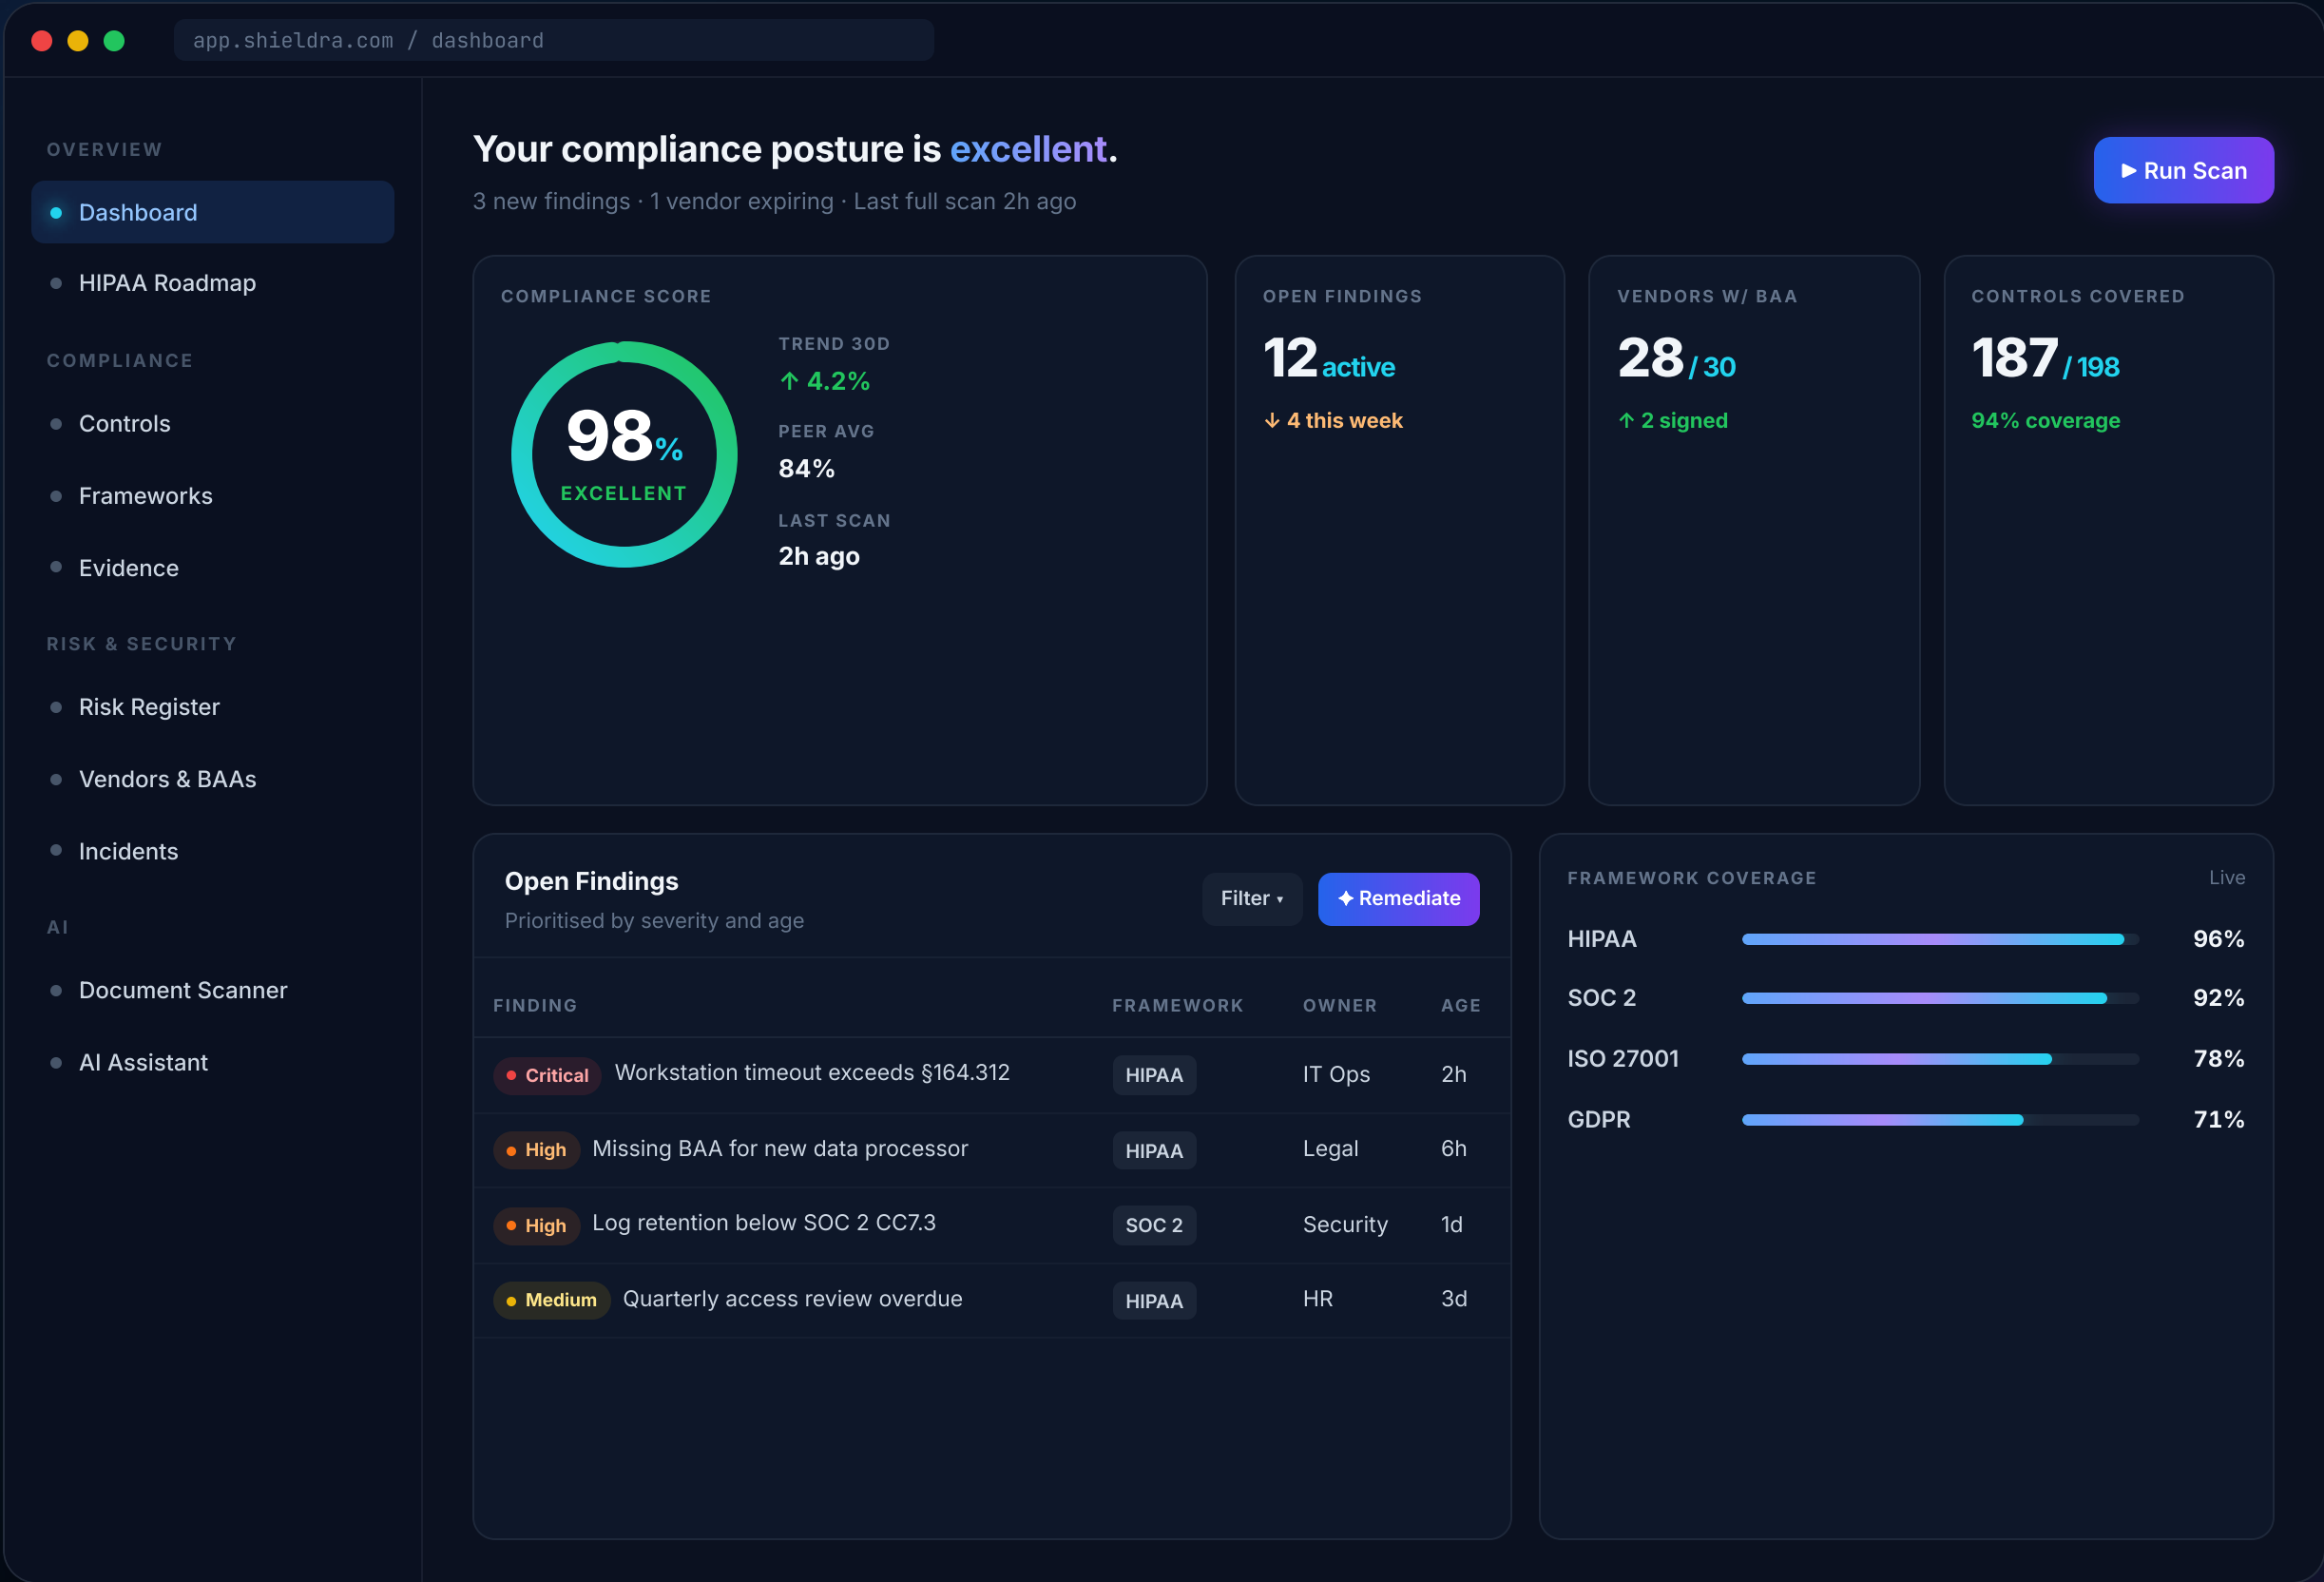

- ✓ Live compliance score across HIPAA and SOC 2
- ✓ Open gaps, owners, and remediation in one view
- ✓ Evidence and BAAs collected as work happens
- ✓ Audit-ready reports generated on demand

• THE PLATFORM

One view of your whole program.

Score, findings, controls, vendors, evidence — all rolled up so leadership sees readiness every day, not just at audit time.

- Live compliance score, updated continuously
- Findings prioritised by severity and age
- Framework coverage rolled into one number

• MAJOR FEATURES

Everything a compliance program needs — **connected.**

HIPAA & SOC 2 Frameworks

Manage both frameworks from one platform — controls, risks, evidence and reports mapped clearly side-by-side.

AI Document Scanner

Upload policies, BAAs and evidence. Shieldra identifies gaps against requirements and tells you exactly what's missing.

Risk Register & Assessments

Track business risks and detailed assessment findings — without forcing your team into auditor-speak.

Vendor & BAA Management

One place for vendor records, signed agreements, risk levels, expiry dates and SOC 2 documents.

Audit-Ready Reports

Generate auditor packs and customer reports that humans can actually review — not raw JSON or CSV dumps.

Incident & Breach Workflows

Track incidents, timelines, response steps and documentation in one place — with training and policy acknowledgments.

• WHY SHIELDRA IS DIFFERENT

Not another checklist — a **connected graph** of your whole compliance program.

Most tools treat documents, vendors, risks, controls and evidence as separate silos. Shieldra **links them** — so a finding traces to a control, a control to a policy, a policy to the vendor it covers, and every piece carries the evidence to prove it.

- Answer auditor questions in minutes, not days
- Built for healthcare workflows, not enterprise-first
- Continuous — not point-in-time reports

• IN PRACTICE

When a customer or auditor asks, **you already know.**

Six questions every healthcare team gets — and answers Shieldra has ready on day one.

"Show me your **risk assessment**."

"Which vendors **touch PHI**?"

"Do you have **signed BAAs**?"

"What **SOC 2 controls** are covered?"

"What **evidence** supports this control?"

"What **gaps** are still open?"

• CLOSING

Make compliance visible, manageable, and audit-ready.

No full-time compliance department. No massive GRC budget. One platform for the whole program.
